

CLIENT WAIVER FORM

You have purchased one or more sessions to develop a tan on your skin. To help achieve your desired results, please read and sign the following material carefully.

- A spray tan will not prevent your skin from burning in the natural sun or in a tanning bed. A spray tan does not contain sunscreen and does not protect against sunburn. Repeated exposure of unprotected skin while UV tanning may increase the risk of skin aging, skin cancer and other harmful effects to the skin. Please take the proper precautions when tanning with UV light exposure.
- For best results, wait 4-6 hours after spray tanning before showering or engaging in any activity that will cause you to perspire. This will allow your tan to fully develop and will ensure the longest results.
- The spray booth is designed to provide as even a tan as possible. However, users will be different heights and shapes, and may stand in different positions. It is possible you will find some areas of your tan lighter than others. In most cases, these differences are minor and disappear as your tan fades naturally.
- More than one spray tan session per 12 hours is not recommended.
- All of the components of the spray tanning solution have been used in cosmetics for decades and have proven to be safe for the skin. If you have ever had any adverse effects utilizing self-tanning products or moisturizers, consult a healthcare professional before using the product.
- The FDA has approved DHA (the active ingredient in sunless spray tanning) for external application to the skin. For misting applications, the FDA recommends protective measures to prevent eye contact, inhalation or ingestion. To ensure complete protection, the FDA suggests wearing protective eyewear, nose filters, ear plugs, lip balm and undergarments.
- The sunless spray tanning solution which includes a cosmetic bronzer is water soluble and will be removed after the next wash in cold water. However, in some instances, the DHA in the tanning solution may permanently stain undergarments worn during the spray session.
- Tanning solution cannot penetrate hair follicles but many customers wear disposable hair nets (provided by the salon) to keep the solution from getting in their hair. There is no evidence that the tanning solution can change hair color
- If you have any history of asthma or a respiratory condition consult a physician before spray tanning and do not use if you have had any past allergic reactions to DHA products.
- I, the undersigned, understand and will comply with all instructions for proper use of the spray tan service. I am using these services at my own discretion.

I hereby relieve _____ and hold them harmless from any liability involved in the use of the tanning process. The salons and their agents or employees are not liable for any injury to person or property or the loss or theft of any personal property. I know that this facility does not carry liability insurance for injuries caused by tanning devices. I will not tamper with the tanning device. I have been made aware that the salon reserves the right to cancel package without reimbursement for customers who are verbally abusive, act in an inappropriate behavior, do not adhere to the salon rules, and/or act in a destructive or harmful manner. I understand that packages are sold on a per person basis and are not sharable or transferable.

ALL SALES ARE FINAL. I have read the above conditions and information on the spray tan service.
